### **Hazards associated with Municipal Workers**

Objective: Outline the training materials associated with municipal workers and the ways to identify and provide safety measures to ensure minimal exposure.

Scope:

1. Substances, chemicals and material hazards encountered on the job
1. Different types of hazards
2. Your health
3. Different effects of exposure
4. Symptoms
5. Hazardous communication
6. Protection against hazardous exposure
7. Material Safety Data Sheet
8. Understanding the chemical you are using
9. NFPA Diamond
10. Specific requirements for labeling chemicals

11. Personal Protective Measures
12. The code for hazard levels
13. Personal Protective Equipment
14. Special and unique measures for accidental exposure
15. Awareness of chemical dangers for correct, safe usage, transport and storage

Studies have shown that wastewater treatment may generate aerosols containing microbiological and chemical constituents. In fact, the primary route of exposure for workers is probably inhalation. The physical layouts of many sewage treatment plants involve open tanks and basins; plants typically are not designed to prevent aerial dispersion of wastewater during the treatment process. Volatile organics in wastewater may be vaporized or air-stripped during treatment. Many of the compounds are carcinogens and/or mutagens, so sewage workers may be at increased risk of cancer or adverse birth outcomes. Infections from exposure to waterborne disease organisms may be subclinical or may appear as actual disease in wastewater

**MESO will send reminder cards before scheduled safety meetings. Should there be a change due to weather or other unforeseen occurrence, we will contact the appropriate safety personnel by phone.**
